

Georgios Efthimiou

I hold a degree in Mineral Resources Engineering from the Technical University of Crete. Even since my early student years, I was attracted to the subject of Occupational Health & Safety and focused on it by preparing my dissertation entitled "Managing Health & Safety in Underground and Open-Pit Exploitations".

From 2001 until 2005 I worked as a Production Engineer and H&S Engineer in underground bauxite mines located in the region of Central Greece. Following that I was employed by a multinational company as HSE Coordinator, supervising more than fifty quarries, ready-mix plants and construction sites in Greece.

From July 2008 and for ten years I was the Construction & Industrial Projects Manager in the biggest Greek H&S services provider company, undertaking the overall management (commercial, administrative and technical) of projects related to construction sites and industrial plants.

From July 2018 until March 2021, I led another H&S services provider company based in Athens Greece, from the position of General Manager.

Since February 2021 I work as H&S Director for a major Greek organization operating in the energy sector (Independent Power Transmission Operator).

Certified "Aluminium Stewardship Initiative Auditor" since April 2020.

Aiming to incorporate New Digital Technologies in the field of Health & Safety, I was the "father" of the "Decent.H&S" SaaS project idea, introducing the Blockchain Technology into Health & Safety Management.

Enthusiastic and passionate about Health & Safety, I'm always open for new challenges and opportunities in corporations that recognize human capital importance and prioritize sustainability and global values.
